Mini-Project Title: - Local Finder

Student-1 Name: Akshay Doshi

Student-1 Id: 23CP027

Student-2 Name: Viral Bhoi

Student-2 Id: 23CP029

Description:

The Local Finder platform is designed to connect customers with local vendors, allowing them to search for products and either visit the shops in person or request delivery. The goal is to provide a centralized marketplace for local vendors to market their products while offering convenience to customers.

Modules Required:

1. User Management Module

   - Handles user registrations and role assignments.

   -multiple type of user login would be there i.e. normal customer, vendors & admin/staff.

2. Product Management Module

   - Manages product listings from vendors.

3. Search Module

   - Facilitates product search functionality.

4. Delivery Request Module

   - Manages customer delivery requests and interactions with staff.

5. Vendor Management Module

   - Allows vendors to manage their profiles and inventory.

6. Admin Dashboard Module

  - Provides administrative controls for managing users and products.
